Note: Any product information provided is solely indicative and final manufactured product may vary from what is shown. Any given dimension refers to products nominal size, not actual working size. For correct further details please contact us.

When face selection on flowing patterns panels is requested we cannot guarantee that what selected will be all available as product is packed randomly by the manufacturers.

When placing such orders, we will require to be given possible alternatives else we will pack these on our discretion to the required quantities. Additionally, continuous veining patterns across sequential panels is subject to the typical tolerance of natural stone products and as such some miss-alignment must be accepted.

Thermal shock resistance	UNI EN ISO 10545-9	Resistant
Crazeing resistance	UNI EN ISO 10545-11	Resistant
Frost resistance	UNI EN ISO 10545-12	Resistant
Chemical resistance	UNI EN ISO 10545-13	Resistant
Stain resistance	UNI EN ISO 10545-14	Resistant
Colour stability upon exposure to light	DIN 51094	Conforming
Friction coefficient (slip level)	DIN 51130	Available on request
	DIN 51097	Available on request
	ASTM C1028 C.O.F.	Available on request
	B.C.R.	Available on request
	DCOF (BOOT 3000 - section 9.6 ANSI 137.2012)	Available on request
Salt resistance	NaCl	Resistant
Reaction to fire	UNI EN 13501-1-2009	Available on request

FEATURES

- Thickness from 5.8mm to 12mm
- Lightweight thin panels
- Resistant to fungi
- Resistant to UV light
- Resistant to heat
- Easily cut and drill on site
- Easy to clean and maintain
- Highly compacted porcelain stoneware
- Extra large panel sizes, from 1200x1200 to 3200x1600*

*Sizes and thicknesses subject to colour selection. Panels are supplied randomly.

APPLICATIONS

- Suitable for internal and external use
- Suitable for wet areas
- Suitable for bench tops, vanities, splashback and feature walls

Mitred Edge

GUIDELINES

MEGASLIM® BENCH TOPS AND VANITIES BY EVERSTONE®

Through the Megaslim® vast assortment of colours and finishes, Everstone can offer the most advanced range of ready-to-install 6mm and 12mm thick countertops.

AVAILABLE STOCK SIZES AND FINISHES

Standard benchtops are cut from 3200x1600x12mm full body porcelain panels, this allows for the manufacturing of most common bench tops requirements with a minimal amount of joints in Polished, Honed, and Matt surfaces.

DESIGN, INSTALLATION, AND MAINTENANCE GUIDE

Kitchen / Vanity cabinets checklist

The Megaslim® porcelain countertops consist of rigid high density, 6mm and 12mm thick, porcelain panels that require minimal substrate support. Tops are factory cut to match requirements with minimal on-site involvement.

No matter how the Megaslim® preassembled porcelain countertops are used, whether on a new installation or when refurbishing existing cabinets units, it is important to always plan for correct components allocation and tops dimensional limits.

When more than one unit length is required, all joints in the tops should be well supported underneath and preferably located over existing cabinet panel edges.

Any appliance weighing more than 5kg should be adequately supported by a dedicated additional frame. Avoid over-tightening or fixing any surface fittings directly to the Megaslim® panels.

Installation of countertops

Prior to installing the Megaslim® countertops, care should be taken to check the cabinets and base units for strength and stability and that each unit is correctly fastened to the wall and each other. The surface of the cabinets must be flush and free from any obstructions. Make allowance for any out of square cabinet if necessary.

The Megaslim® countertops should be placed over sound solid and truly flat cabinet frames and where required, allow for additional support to the rear and cross members of the cabinets using additional rail of an approximate dimension of 100mm to 150mm in width.

When required, any cut-outs should be located well within the limits of a single cabinet unit and placed not less than 80mm from any side joint. For square cut-outs always allow for a minimum radius of 5mm at each corner. Use only wet cutting tools to avoid generating excess heat to the tops. To adhere the tops to the cabinet, apply a continuous 10mm thick bead of adhesive over the edges of the cabinet. Glue down the Megaslim® countertops allowing a small gap between the countertop rear edge and the wall face of approximately 3 to 5mm. level adjacent tops before the adhesive cures. Once tops are installed, allow sufficient time for the bonding adhesive to cure before any additional required cutting is performed.

When overhang is required, allow adequate support. If necessary, make use of metal angle as support and adequate additional rails as spacers.

Adhesive recommendations

- **Megaslim® to cabinets:** Sikaflex 252, Mapei Adesilex G19, or similar Polyurethane adhesive.
- **Megaslim® to Megaslim®:** Tenax EpoxGres or Akemi Akepox 5010
- **Megaslim® to perimeter:** suitable colour natural curing silicon
- **Megaslim® to splashback:** Laticrete 345 Platinum Adhesive
- **Megaslim® patching:** Inegra Xi Bonder, Tenax EpoxGres or Akemi Akepox 5010

Care and Maintenance

The Megaslim® porcelain panels are high-quality non-porous stain, heat, and scratch-resistant, which require minimum maintenance. Spills should be cleaned using a common household detergent and rinsed with clean water. Do not use it as a chopping board.

Routine cleaning – best method to minimise stubborn stains is to wash away stains such as red wine, food, oil, or corrosive drinks by using warm water and small quantities of a mild and non-abrasive household cleaning product with a soft, non-abrasive cloth. Do not use products that have high alkaline or acidic pH levels, such as oven or drain cleaning solutions, especially on polished surfaces.

Stubborn stains – Use a nonabrasive cleaning product, microfiber cloth, or mild household cleaning products that are cream-based. To remove other hard substances that may adhere to surfaces, always use a plastic scraper to gently remove the material. Avoid the use of industrial harsh chemicals on the surface of the material, such as paints, paint strippers, permanent markers, and inks.

Heat resistant – although Megaslim® is thermal shock resistant, it is always advisable to use a heat mat or similar as normal practice when placing hot pots on the bench.

Scratch-resistant – Megaslim® panels have a very hard surface and will easily withstand daily normal use. Even so, we recommend using cutting boards and avoiding sliding heavy metallic objects along the surface.

Wall and Floor Cladding

The T6 panels are best suited for wall cladding for internal or external wall cladding or internal floors and require full adhesion using a suitable adhesive.

For walls, additional hidden anchoring is required where installation exceeds the minimum height required by the local council regulation.

The substrate needs to be rigid, flat and free from any dust or contaminants that could affect the adhesive bonding.

To eliminate possible air trapped behind the panels, tap the panel surface moving from the centre towards the edges.
